### INNOVATION:

- We design and build our own equipment specifically for our water transfer services for maximum safety and efficiency
- Plug Catchers have a unique dual-sided design to eliminate down-time while drilling out plugs
- Combination Trailers house manifolds, sand separator, and production separator, for efficiency and space-savings at the well-site

### EQUIPMENT RENTAL:

- Flow Testing Equipment
- Poly Pipe
- Light Plants
- Generators
- Centrifugal Pumps

"Our most important resource is our people. Their experience and dedication, backed by our innovative and high-quality equipment, ensure customer satisfaction."

-Cole Ortowski, Co-Founder

## WATER MANAGEMENT AND FLOWBACK SERVICES

### WATER TRANSFER

- Our self-contained, high-rate pumps are custom designed and built for high rate frac water transfers
- Ability to set in-line booster pumps in a series for longer distance transfers
- Single and twin pumps available
- We handle difficult jobs such as high rates with variable elevations and long distance

### FILTRATION

- We provide fluid filtration and treatments to meet the customers' needs
- Impact has specialty pipe with non-leak connections to handle high-rate salt water transfers
- We can also assist with the lining of frac pits, a critical step when dealing with high salt content water

### FLOWBACK

- Complete rig-up from the wellhead to the frac tanks
- Our flow testing equipment includes 5 and 10-valve manifolds, 1502 2" and 3" iron, sand separators, 2 and 3-phase test separators, and plug catchers
- All flow testing well data is updated hourly for real-time access via a secure website
- Our archived data is also at your fingertips, providing valuable historic data for your field and management staff
- In-house pressure testing facilities to ensure all piping and connections meet job requirements

### POLY PIPE

- More than 600,000 feet of 2" and 3" poly
- Over 50 pumps
- Round-the-clock service
- We have the equipment and manpower to handle your job
